

ABOUT US

WHY UNIMAK?

The University is part of the general socio-economic and political fabric of a given society. Throughout history, universities have played three triumvirate/interlocking roles. These roles are:

Teaching/instruction, Research and public service/community engagement

ADMISSION REQUIREMENT

An applicant MUST be a holder of 5 WASSCE or equivalent extra exams including English Language, Mathematics, and three other science related subjects in not more than two sittings.

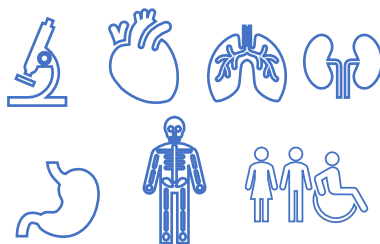

MEET OUR HEAD OF DEPARTMENT

"The Department of Public Health at UniMak is dedicated to building a healthier Sierra Leone through quality education, research, and community service. We train passionate and skilled public health professionals equipped to tackle pressing health issues at local, national, and global levels. Our curriculum blends theory with practical experience, empowering students to lead impactful health interventions. Join us now in shaping a healthier future for all."

Sr. Magdalene Philip Umoh

WHY CHOOSE US?

Staff members

Our teaching staff are equipped with knowledge and skills that will enrich your learning experiences.

Practical learning

Our program lays emphasis on hands-on projects through internship opportunities to renowned institutions, where students are been exposed to either the epidemiological world or within the four walls of the Public Health Laboratory field based on what they major on.

Course structure

Our BSc Hons Public health program at UNIMAK is the only place where you can major on either Public health Laboratory or Public Health epidemiology

ABOUT PUBLIC HEALTH UNIMAK

The Public Health BSc (Hons) program at the University of Makeni is a four-year tuition course that also includes dissertation writing and an internship.

The program is structured in two major areas; in the second year, students have the opportunity to major in either Public Health Epidemiology or Public Health Laboratory Sciences.

This specialization equips students with essential skills and knowledge relevant to both the field of epidemiology and the public health laboratory sector.
